

NEW EUROPEAN HYDROGEN PLAYER H2EUPOWER IS STARTING

H2EUPower, a brand new division of RAMPINI, is proud to announce the official launch of its highly anticipated line of hydrogen fuel cell power system solutions for commercial vehicles, off-highway and stationary applications for Europe.

Originally a hydrogen mobility focused engineering team within RAMPINI, **H2EUPower** was formally established as an independently operated division of the company in early 2024 with the goal of extending access to design, performance and supply chain benefits to the OEMs across the entire European hydrogen ecosystem. Over the following few months, the division was further bolstered with some of the top fuel cell power systems' technical and commercial experts, thus bringing together an unprecedented experience of over 25 fuel cell power system OEM design wins across Europe, North America and Asia Pacific.

H2EUPower was able to accomplish a complete line up of solutions for applications ranging from midi-buses to medium & heavy-duty vehicles as well as off-highway and stationary versions assembled as modular solutions that are tailor-made for the respective applications. These systems in the power range from 30 to 140 kilowatts are designed to significantly reduce development time and ultimately go-to-market time for interested Commercial Vehicle Builders (OEMs).

While being able to benefit from RAMPINI as an anchor customer with a range of fuel cell power system applications, **H2EUPower** is operating strictly independently from the mother company in terms of both technical and commercial aspects of its business.

H2EUPower is operating under the leadership of Mr. Luigi Fusi – a technology industry veteran, responsible for all aspects of commercial operations in the EMEA market (Europe/Middle East/Africa). He is active in the Energy sector for more than 10 years.

“Over the last few months, **H2EUPower** has done an incredible job in putting all the experience we have had with OEMs around the world, and producing what I believe is truly the best of breed solution for our European customers”, says Luigi Fusi. “We are just getting started full scale now! We have a number of very exciting technological and sales options we are looking forward to sharing with the market in the upcoming weeks and months.”
